

Setting Up Your Domain In Clickfunnels

Step 1:

When you have added your funnel to your Clickfunnels account and saved your hop link, you'll need to connect it to your domain.

Registering your domain in Clickfunnels:

Once your funnel is ready, go to the settings section of the funnel.

Select "Add/Edit Domains"

DOMAIN

The domain for the funnel — Add/Edit Domains

PATH

super-affiliate-system-presells-2019c2ehxyeu

SMTP CONFIGURATION

Provide your Account SMTP Settings to customize outgoing emails from Clickfunnels

Step 2:

Add your domain.

Add your own domain to strengthen your brand

Add a custom domain to help customers remember your website. It's like vanity license plates for your business!

Add New Domain

Add new domain

Register a new domain or connect one that you already own.

Register a new domain

Let us register your domain for you.

Choose a domain

Add your own domain

Add a domain or subdomain that you own.

Use an existing domain

Add the domain you created in Bluehost.

Add your own domain

Enter the domain name you already own below and we'll take care of the rest.

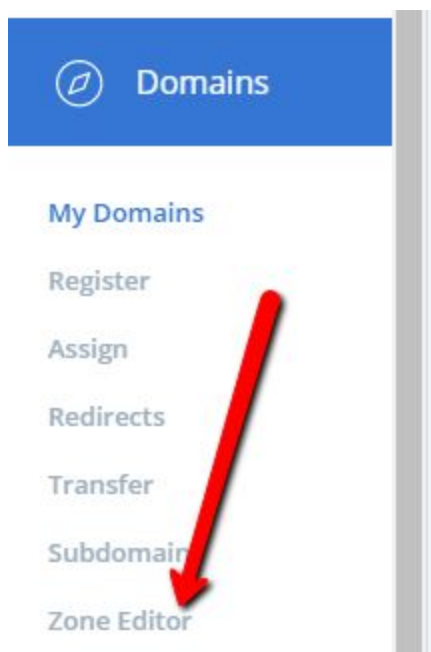

[Redacted domain name input field]

Add domain

Step 3:

You will now need to connect your domain to your Clickfunnels account. To do this, you need to change the CNAME record for www from your domain to target.clickfunnels.com.

Go to your Bluehost account and click domains and zone editor.

CNAME (Alias) [What's this?](#)

Click edit

Host Record	Points to	TTL	ACTION
www	target.clickfunnels.com	14400	 
ftp	target.clickfunnels.com	14400	 
cpanel	target.clickfunnels.com	14400	 
webmail	target.clickfunnels.com	14400	 
imap	target.clickfunnels.com	14400	 
pop	target.clickfunnels.com	14400	 
smtp	target.clickfunnels.com	14400	 

CNAME (Alias) [What's this?](#)

Host Record	Points to	TTL	ACTION
www	target.clickfunnels.com	14400	 
ftp	██	14400	 
cpanel	██	14400	 
webmail	██		 
imap	██		 
pop	██	14400	 
smtp	██	14400	 

Change your domain name to target.clickfunnels.com and save

Step 4:

Once saved, go back to your domains page in Clickfunnels.

Click “I’ve done this step”.

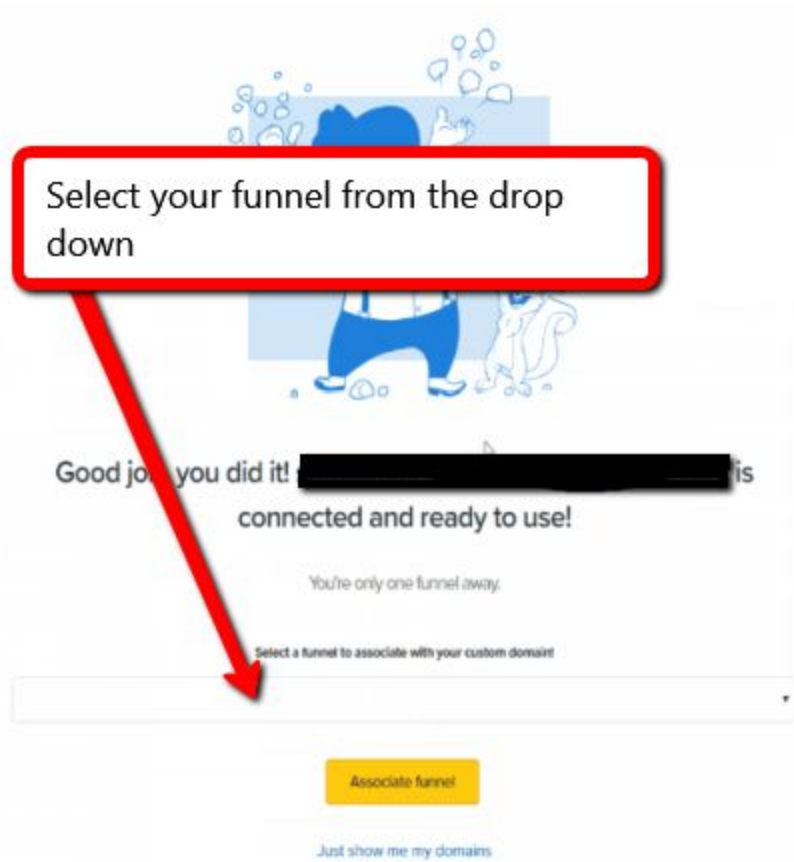

**How to connect your domain to ClickFunnels**

In order for your custom domain to work you'll need to log in to where you bought your domain and add a CNAME record that points www at target.clickfunnels.com. If you're not sure how to do this we have [detailed instructions](#) for most domain registrars.

This should now say “your domain is connected”. Once this screen appears, associate your SAS funnel with your domain from the drop down list.

If you have multiple funnels of the same name, it’s advised to archive the extra ones so you do not get confused over which one to associate.

If your domain says “verified” in blue for status, you’re connected.

If it still says “unverified” you may have to delete the domain and add it again.
